GLACIAL POSSIBILITIES.

Interesting Speculations Concerning Sor Ice-Mountains. Glaciers plunge into the sea, in many cold countries, and perish by drowning, their dismembered remains floating

away as bergs. But their end is by dis-solution where the annual mean temperature rises considerably above the freezing point. At some certain level five alternating periods of diminution and growth. The meteorological changes occasioning and emphasized by these oscillations are very slight. Their character, however, is unmistakable, and such as might have been an ticipated. That is to say, glacial furnishes the principal article of diet, crease accompanies a warm and dry the inhabitants have found numerous cycle; glacial increase, one that is damp methods of utilizing this delicious fruit, and cold. Considerable alarm was accordingly felt lest the flooding of the Sahara, numbered among the futile projects of a recent sanguine epoch, should result in a largely-increased snowfall upon the Alps, and the conse

quent ice submergence of inhabited val-leys. Such fears, it is true, rested on a

meteorological misapprehension, y they were, in principle, well founded. The glacial balance is sensitive. A very slight continuous preponderance of supply over wasting night, in a few years, betray itself by really formidable and altogether irresistible affects. Without one additional degree of cold, it is conceivable that a persistently-aug-mented deposit of snow upon the Gerstenhorner and the Schneestock, English crape lined with thin silk, made quite short, reaching merely to the waist-line, and trimmed with a plaited collarette of crape. Sometimes embroidered crape is used for the trimming. A jacket of the material of the dress or of silk covered smoothly with crape is worn in the first when an ice stream close upon two when an ice stream clos starting from the same source, crossed the frozen or non-existent lake of Geneva, and debouched by Culoz upon Lyons. Without severe cold as well as heavy precipitation, ice could not pos-sibly have gained so great an ascen dency. And this was no local phenomenon; it was simultaneously prevalent over widely-separated tracts of the earth's surface. -Edinburgh Review.

A novelty is a bodice with draped see tions from the sleeves across the front and back. These sections are gathered into a puff over the bust, form fluffy epaulets at the shoulders, and are made as flat as possible at the back; but this style is neither pretty nor be-It gives a suggestion of round shoulders, and is not at all symmetrical.

No contume is in good taste which has any special prominence over the shoul-der-blades. Such an arrangement always destroys the graceful lines of good figure, and makes a bad or indif-ferent one simply bideous. The utmost flatness should be preserved from the tops of the shoulders down the back to the waist-line. Any attempt at this sort of trimming must be disposed with the greatest care, or the effect of the most beautiful costume is easily marred. -N. Y. Ledger.
